

ISO-Base™ Planks are available with three different surface / liner options.

- **Stainless Steel Surface**

For free-rolling action on medium weight equipment where no extra damping is required

- **Polyurethane Liner - Bonded to Stainless Steel Surface**

For light weight equipment or stand-alone cabinets that require damping to reduce displacement and input accelerations

- **QuakeCoat™ Elastomeric - Damping Liner**

For today's heavier IT equipment to provide maximum damping. Patent pending QuakeCoat™ ensures the isolator achieves the maximum displacement capacity, under extreme weight loads, without degradation
